DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Steven Moore on 2/2/2009.

With regards to claim 1 the limitation of "*measuring a room acoustical response at each listener position in a multiple-listener environment*" is changed to of "**measuring with a microphone a room acoustical response at each listener position in a multiple-listener environment**".

With regards to claim 8 the limitation of "*measuring acoustical characteristics of the environment at each expected listener position in the multiple-listener environment*"; is changed to "**measuring with a microphone acoustical characteristics of the environment at each expected listener position in the multiple-listener environment**".

With regards to claim 14 the limitation of "*warped room acoustical responses, wherein the room acoustical responses are measured at each of an expected listener position in a multiple-listener environment*"; is changed to "**warped room acoustical responses, wherein the room acoustical responses are measured with a**

microphone at each of an expected listener position in a multiple-listener environment”.

With regards to claim 20 the limitation of “*warping each room acoustical response, said each room acoustical response obtained at each expected listener position*”; is changed to “**warping each room acoustical response, said each room acoustical response obtained with a microphone at each expected listener position**”.

Allowable Subject Matter

1. Claims 1-6, 8-12, 14-17 & 19-22 are allowed.
2. The following are examiner's statement of reasons for allowable subject matter:

Referring to claim 1, the Abel reference (US Patent 6,072,877) discloses a method for correcting room acoustics by warping each of the room acoustical response measured at said each listener position (*fig. 7a: 121*); determining a general response by computing a weighted average room acoustical responses (*fig. 10: 74; col. 10, lines 11-14*). The Inoue et al reference (US Patent 5,771,294) discloses the method comprising: measuring a room acoustical response at each listener position in a multiple-listener environment (*Inoue et al, col. 4, lines 48-60*); to obtain a room acoustic correction filter (*Inoue et al, fig. 5: 38*) wherein the room acoustic correction filter corrects the room acoustics at the multiple-listener positions. The Abel and Inoue et al references taken alone or in combination, do not disclose, teach or fairly suggest generating a **low order spectral model** of the general response; obtaining a warped

Art Unit: 2614

acoustic correction filter from the **low order spectral model** where the warped acoustic correction filter being the inverse of a **low order spectral model** and unwarping the warped acoustic correction filter as recited in independent claim 1.

Claims 8, 14 & 20 are allowed for the same reason as claim 1.

Claims 2-6 depend on claim 1. Claims 9-12 depend on claim 8. Claims 15-17 & 19 depend on claim 14. Claims 21-22 depend on claim 20.
